## Illinois National Electronic Disease Surveillance System

I-NEDSS (Illinois National Electronic Disease Surveillance System) Analysis, Visualization and Reporting (AVR) is the reporting functional of the I-NEDSS application. I-NEDSS, a web-based application, is utilized by all 95 LHDs in Illinois for disease reporting and surveillance. Data in the I-NEDSS AVR is real-time (e.g., as soon as information is entered into I-NEDSS, it is available in the AVR) and includes historical data (data from IDPH legacy systems). Access to person-specific data is limited to the LHD's jurisdiction, but aggregate data by city, county and state are also available.

### **I-NEDSS AVR Provides:**

- Adhoc report creation with statistical capabilities
- Canned reports
- A user-friendly interface for developing reports in several formats (graphs, tables, etc.)
- Access to historical and current data from the same universe for running trend data
- Flexibility in adjusting report output
- Exporting features
- Access to census data within the AVR for calculation population-based rates

### **Accessing I-NEDSS**

In order to access the I-NEDSS data, an individual must be registered as an I-NEDSS user. This requires authorization by the LHD's administration.

To register:

- Go to [www.idphnet.com](http://www.idphnet.com).
- Click "Sign Up Now."

### **Additional Information**

Improving Public Health, One Community At a Time

For more information on I-NEDSS visit the IDPH Web Portal at: [www.idphnet.com](http://www.idphnet.com).
